Kids ADHD VR Solution

ADHD VR Assessment

Through VR virtual classrooms and CPT paradigms, combined with eye-tracking technology, we objectively quantify a child's attention level, reaction speed, and resistance to distraction, providing a scientific foundation for attention assessment and intervention.

Core Technology	Assessment Content
VR Immersive Environment	Simulates real classroom settings to mirror daily learning conditions
Eye-Tracking	Measures attention, response duration, and gaze trajectory
CPT Continuous Performance Task	Records attention lapses and error rates
AI-Powered Analysis	Automatically generates a quantified attention assessment report

Realistic scenarios that closely mirror daily learning conditions +

Objective eye-tracking data with no subjective bias +

Quick to complete, ensuring high compliance among children +

Clear quantitative metrics that support clinical diagnosis

ADHD VR Rehabilitation

Based on ADHD assessment results, the AI automatically generates personalized rehabilitation programs. Through immersive VR gamified tasks, it specifically targets and strengthens attention and executive function. AI adaptively adjusts difficulty in real time, quantifies training outcomes throughout the process, and seamlessly bridges clinic and home settings.

Covers four core competencies: attention, executive function, reaction speed, and resistance to distraction. Includes over 20 gamified training tasks for dual cognitive and behavioral reinforcement.

AI monitors training performance in real time and adaptively matches difficulty.

Full quantitative training data, with automated outcome analysis reports generated.

Assessment Results → AI generates personalized plans → Adaptive difficulty training → Cloud data synchronization → Remote optimization by clinicians

Core Advantages

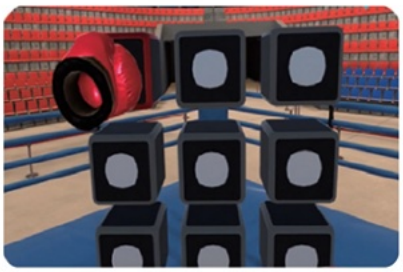

- **Personalized Plans:** Automatically tailored post-assessment to precisely target individual skill gaps
- **AI Adaptive Difficulty:** Real-time difficulty adjustment matches the child's
- **Gamified Immersion:** Enhances treatment adherence, making intervention more effective
- **20+Targeted Tasks:** Comprehensive reinforcement of attention and executive function
- **Clinic+Home Dual Mode:** Data synchronization ensures uninterrupted rehabilitation

Kids ASD VR Solution

VR Autism Assessment

Using VR social scenarios and high-precision eye-tracking, we analyze a child's gaze patterns toward faces, objectively assess social attention levels, and enable efficient screening and functional classification of autism spectrum disorder (ASD).

VR social scenarios + eye-tracking analysis + AI gaze proportion algorithm

Assessment Content

- Measures gaze time on eyes, nose, mouth, and non-social areas
- Identifies differences in social attention styles
- Quantifies interest in social cues and emotions
- Distinguishes between high-functioning and low-functioning ASD profiles

Advantages

- Non-invasive&Comfortable,High compliance among children
- Objective Gaze Data, More accurate assessment
- >85% accuracy, clinically reliable

Free-Viewing Task Data Example

Task Sequence	Eyes (%)	Nose (%)	Mouth (%)	Non-Social (%)
1	4.14	12.72	37.28	45.86
2	15.06	46.59	16.48	26.88
3	0.29	32.85	39.77	27.09
4	41.94	38.23	18.89	23.98
5	48.02	42.26	18.56	39.68

Mean Eye Gaze Time (%) 17.58

Clinical Significance: Reduced eye contact may indicate social communication difficulties

VR Social Rehabilitation

Based on ASD assessment results, the AI generates a personalized rehabilitation plan tailored for autism. Through immersive VR real-world tasks, it covers emotion recognition, social communication, daily living skills, sensory regulation, and core cognitive domains. AI adaptively adjusts difficulty progression, quantifies training outcomes throughout the process, and creates an integrated clinic-home rehabilitation loop.

VR Immersive Interaction + **AI Adaptive Algorithm** + **Cloud Data Synchronization**

Emotional and Social Skills Development: Facial expression recognition, social communication interaction — enhancing social adaptability.

Real-world Daily Living Practice: Safe kitchen, supermarket shopping VR simulations — mastering independent living skills.

Sensory Soothing and Regulation: Expansive grassland immersive scenes — reducing sensory sensitivity, stabilizing emotional state.

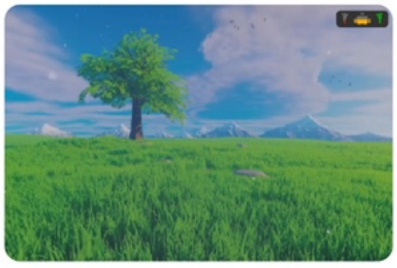

AI-Precise Intervention: Automatically generates personalized plans, AI adaptive difficulty progression, cloud data synchronization.

Core Advantages

- **AI-Personalized Plans:** Automatically generates ASD-specific rehabilitation plans post-assessment
- **AI Adaptive Difficulty:** Matches ability level in real time for more precise intervention
- **Multi-Dimensional Rehabilitation:** Comprehensive improvement in emotion, social skills, daily living, and sensory processing
- **Real-World VR Scenarios:** Immersive practice enhances child engagement VR
- **Clinic+Home Dual Mode:** Real-time data sync ensures uninterrupted rehabilitation
